Eric David Rodriguez Flores

MBA - Software & Civil Engineer

I am a Software Developer & Data Analyst with experience in the industrial and construction sectors, where I developed skills in Python and SQL to automate reports, build data pipelines, and optimize project budget control. I define myself as a curious, self-taught person oriented toward continuous improvement. I enjoy understanding complex problems, cleaning chaotic data, and transforming it into clear information that helps make better decisions. I am currently in a process of active growth toward Data, Computer Vision, Data Science and Machine Learning, complementing my experience with courses in predictive modeling, statistics, and software development best practices. My goal is to combine my operational experience with new technical capabilities to build smarter and more scalable solutions. I am looking for a team where I can keep learning every day, contribute my current skills, and grow as a data professional.

EXPERIENCE

2024-Present **Software Engineer** Edo Méx, México

Freelance · 2 YEARS

- Built digital applications for task automation.
- Developed computer vision systems for real-time object counting (Python, detection models).
- Optimized workflows with custom scripts (Java, Python, SQL), reducing processing times.
- Applied OOP and relational database design for large-scale data management.
- Used statistics and Python for automated counting and data-driven decisions across industries.
- Analyzed with the Natural Language API - Designed Websites.

2020-2022 **Data Analyst** Coahuila, México

Constellation Brands (Worley) · 2 YEARS

- Automated strategic reports using Python and Excel.
- Built data pipelines for cleaning and processing operational data with custom scripts.
- Extracted and processed large datasets from SAP S/4 HANA.
- Supported system implementation and continuous improvement.
- Managed master data and performance analysis in SAP S/4 HANA.
- Automated cleansing and consolidation of SAP data.
- Analyzed project costs and budgets using Excel, Python, and SQL.
- Updated WBS elements in SAP S/4 HANA.
- Analyzed unit prices and procurement data (PR/PO) with Python and SQL.
- Organized company assets following internal classification system.

2015-2019 **Structural Engineer** Nuevo León, México

VITRO · 4 YEARS 4 MONTHS

- Developed Python scripts to automate complex cost estimations and performed SQL queries on large datasets to analyze project profitability.
- Implemented rigorous SQL validation constraints and Python-based data cleaning processes to ensure the integrity and quality of technical project documentation.
- Performed structural analysis and

design in compliance with industry standards. - Managed the construction of industrial plants and warehouses, overseeing projects from inception through successful delivery. - Successfully negotiated with contractors and suppliers to optimize project profitability and cost-efficiency. - Guaranteed full adherence to government regulations and building codes throughout the project lifecycle. - Prepared and presented weekly progress reports, providing critical insights into ongoing engineering developments. - Developed investment budgets to evaluate the viability of proposed projects, facilitating informed executive decision-making. - Supervised construction sites to ensure strict compliance with project specifications and the maintenance of rigorous quality standards. - Reviewed and approved contractor estimates, ensuring financial accuracy and transparency. - Proficiently prepared cost estimates and Unit Price Analysis (UPA) to support precise project budgeting. - Effectively managed project programming and construction controls, consistently meeting all deadlines and objectives. - Executed and supervised construction works, prioritizing quality and operational efficiency at all times. - Conducted comprehensive building assessments and structural repairs to enhance safety and long-term integrity. - Performed structural analysis and design in compliance with industry standards, including API, NTCDF, LRFD, ACI 318, AWS, ASCE, and CFE, with high precision in technical drafting.

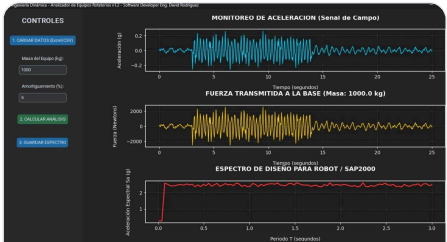

EDUCATION

2005-2010 Civil Engineer Nuevo Leon, Mexico
Universidad Autonoma de Nuevo Leon (UANL) · 5 YEARS
Civil Engineering.

2020-2022 Master of Business Administration Mexico city, Mexico
Uniersidad Tecnologica de Latinoamerica (UTEL) · 2 YEARS
Master of Business Administration.

2022-2026 Software Engineer Nuevo Leon, Mexico
Universidad Ciudadana de Nuevo Leon (UCNL) · 4 YEARS
Software Engineering.

PROJECTS

Dynamic Engineering App

The Dynamic Engineering App is a specialized structural dynamics and earthquake engineering tool designed to bridge the gap between raw seismic data and structural analysis software. It automates the processing of ground motion records (accelerograms),

Wind Loads Design CFE App

The Wind Loads Design CFE App is an engineering software solution designed to automate the calculation of wind design forces on buildings and structures in strict compliance with the CFE Manual (Manual de Diseño de Obras Civiles - Diseño por Viento). The application streamlines the

Data Science for MovieLens Project

The MovieLens Project is an end-to-end Data Science and Big Data infrastructure project designed to ingest, process, and analyze massive datasets of user-generated movie ratings and metadata. The project implements scalable machine learning algorithms to build a personalized recommendation engine while providing deep business intelligence insights into user behavior, cinematic trends, and demographic preferences.

Wine Quality Prediction

It focuses on applying advanced statistical learning and machine learning techniques to predict the quality of wine based on its chemical profile. Utilizing datasets containing physicochemical properties of red and white variants (such as acidity, residual sugar, and alcohol content), the project builds, evaluates, and compares multiple predictive models to classify wine quality or predict it as a continuous score.

Google Fusion - Dashboard-Sells

The Google Fusion: Dashboard-Sells project is an enterprise-grade business intelligence (BI) platform that automates the ingestion, transformation, and visualization of transactional sales data. By leveraging cloud-native data integration pipelines, the system consolidates fragmented sales data from multiple channels (CRMs, e-commerce platforms, and ERPs) into a centralized data warehouse, generating real-time, interactive dashboards to track revenue performance, representative quotas, and funnel conversion rates.
